

INTERNAL HANDBOOK

Innobot HR User Guide

Business-user guide for registering candidates, sending assessments, reviewing results, and managing internal access in Assessment Hub.

DOCUMENT DETAILS

- **Product name:** Assessment Hub / Innobot Premium Screener
- **Primary audience:** HR admins, recruiters, coordinators, hiring managers, reviewers
- **Prepared from:** local repository inspection of screener-v2
- **Version date:** March 30, 2026
- **Format:** print-ready PDF without screenshots in this edition

WHAT THIS GUIDE COVERS

Candidate registration, CSV imports, resume handling, notes, assessment setup, candidate test experience, results review, exports, and internal user/role administration.

This version intentionally excludes screenshots so your team can insert final approved visuals later. A screenshot checklist with exact pages and caption recommendations is included in the appendix.

TABLE OF CONTENTS

Guide Map

1. Document purpose
2. Who should use this guide
3. At-a-glance quick start
4. Main areas of the system and when to use each one
5. End-to-end workflow from registration to decision
6. Registering a candidate
7. Importing candidates from CSV
8. Managing resumes
9. Adding and using notes
10. Tracking stages and statuses
11. Creating and sending an assessment
12. How the assessment builder works

13. How assessment sharing works
14. What candidates see before and during the test
15. Integrity/security modes explained
16. How to review results
17. How to interpret Pass / Review / Fail
18. Filters, comparison, and exports
19. Managing internal users and roles
20. Troubleshooting / FAQ
21. Best practices
22. Quick-reference appendix
23. Recommended screenshots to add later

How to use this handbook

Read Sections 1-5 once to understand the overall model, then use the workflow sections as day-to-day reference. HR admins will likely use the administration and governance sections more often; recruiters and hiring managers will spend most of their time in the candidate, assessment, and results sections.

1. PURPOSE

Document Purpose

Assessment Hub combines candidate tracking, assessment delivery, results review, and lightweight internal administration in one workspace. This guide explains how internal teams should use the system consistently and confidently.

What the System Is For

- Register and track candidates in a structured hiring workspace.
- Upload and manage resumes and review notes.
- Build assessments from reusable presets and add-ons.
- Issue share links, Test IDs, and passcodes for candidates.
- Review results, compare candidates, and export filtered views.
- Manage internal users and role catalogs.

Who Should Use This Guide

- **HR admins:** user access, role catalog, workflow standards, governance.
- **Recruiters / coordinators:** candidate creation, imports, ownership, notes.
- **Hiring managers / reviewers:** assessment review, candidate decisions, comparisons.
- **Internal business users:** understanding statuses, exports, and candidate experience.

Assumption

This guide describes the built-in product flow visible in the repository. Exact add-on names, preset combinations, and role catalog entries may vary by environment because those are stored in the application database and can be configured by admins.

At-a-Glance Quick Start

1. Open People

Use the Candidates

2. Prepare the candidate

Add the role, owner, resume,

3. Build and send

Create an assessment,

4. Review and decide

Use Results to review the

workspace to search, register, import, and update hiring records.

stage, and notes so the record is review-ready.

confirm the score mix totals 100, then share the link and passcode.

score, integrity signals, linked workflow status, and next action.

2. NAVIGATION

Main Areas of the System

People

Primary hiring workspace for candidates. Use it for search, filters, registration, notes, resumes, owners, milestones, and decisions.

Add-ons

Admin/configuration workspace for global assessment add-ons and reusable presets. Use it when standard assessment parts need to be maintained.

Assessments

Operational builder for creating a new candidate or general assessment and generating share credentials.

Results

Review workspace for completed assessments. Use it for filtering, comparison, exports, and linked candidate actions.

Live Sessions

Alternative entry path for launching or joining assessments outside the standard hiring link flow.

Users

Admin-only workspace for internal user creation, role assignment, and role catalog maintenance.

Best navigation model

Think of **People** as the hiring record, **Assessments** as the send/setup action, and **Results** as the evaluation workspace. Teams move back and forth across those three areas most often.

Typical End-to-End Workflow

1 Register the candidate

Create the candidate record with name, email, role, source, and HR owner.

2 Complete the profile

Upload the resume, add notes, confirm stage, and assign the owner responsible for follow-up.

3 Send a screener

Open the assessment builder, choose a preset or add-ons, calibrate score contribution, and generate access.

4 Candidate completes the assessment

The candidate sees the briefing, completes check-in, then works through the timed autosaving runtime.

5 Review the result

Use the Results workspace and detailed review screen to understand score, integrity, and linked candidate context.

6 Update the hiring decision

Move the candidate forward, keep the record in review, or reject/close the profile with a short decision summary.

3. CANDIDATE OPERATIONS

How to Register and Manage Candidates

How to Register a Candidate

- Go to **People > Candidates**.
- Select **Register candidate**.
- Enter **Full name** and **Email**. Both are required.
- Choose a saved **Role** if available.
- Select a **Source** such as LinkedIn, Referral, Job Portal, Company Website, Agency, or Other.
- Set the **Owner** if an HR or recruiting owner is already known.
- Save the candidate, then upload the resume and send the screener afterwards.

Duplicate protection

Candidate email addresses must be unique. If the email already exists, the system sends the user back to the existing candidate record instead of creating a duplicate.

Import Behavior

- The system requires a header row and at least one candidate row.
- Existing emails are skipped rather than overwritten.
- Success messaging tells users how many were imported and how many duplicates were skipped.
- The workspace also supports bulk updates for owner assignment, inbox state changes, and shared notes.

How to Import Candidates from CSV

CSV import is available directly in the Candidates workspace. This is the fastest option for high-volume intake or recruiter handoff lists.

CSV FIELD RULES

Column	Required	Notes
fullName	Yes	Candidate display name.
email	Yes	Used as the unique candidate key.
phone	No	Optional contact number.
positionAppliedFor or role	No	Maps the role/position text during import.
hrOwner or owner	No	Assigns the candidate owner.
batchId	No	Useful for campaign or intake grouping.
resumeSource	No	Optional source labeling.
notesSummary	No	Optional short recruiter summary.

4. CANDIDATE DETAIL

Resumes, Notes, Stages, and Statuses

How to Manage Resumes

- Open the candidate record.
- Use the **Resume** section to upload or replace the PDF.
- Use preview/download when reviewers need the file during evaluation.
- If no resume is attached, the candidate detail view clearly shows it as missing.

Assumption

Resume upload depends on configured blob/file storage. If storage is unavailable in a given environment, the hiring process can still continue, but reviewers will lose resume preview/download from within the profile.

How to Add and Use Notes

The candidate detail page supports structured note types so review comments stay searchable and readable.

SCREENING

INTERVIEW

TECHNICAL

DECISION

GENERAL

- Select the note type before writing.

How to Track Candidate Stages and Statuses

The product separates several concepts so teams can understand where the person is in the hiring process versus what happened in the assessment.

STATUS LAYERS

Layer	What it means	Where it is most visible
Candidate stage	Broad workflow position such as screening or offer.	Candidate record, results-linked workflow, reference tables.
Inbox / UI status	Operational queue signal such as In progress or Need review.	Candidates workspace and linked result actions.
Assessment status	Whether a screener has not been sent, is in progress, or has a result.	Candidates workspace and candidate result summary.
Result status	Outcome of a submitted assessment.	Results workspace and detailed review page.

- Use notes for factual observations, interview outcomes, and clear next steps.
- Use the short **Decision summary** field for the single best summary of current state.
- Remember that recent notes also feed into the candidate activity view.

Hiring Milestones

Each candidate record is created with a default milestone path: **Registered, Screener, Interview, Advanced test**, and **Offer / decision**. Milestones can be manual or platform-driven, and their status progresses through Not started, In progress, Done, or Skipped.

Practical guidance

Keep the candidate stage, inbox status, milestone state, and decision summary aligned. If those four items tell different stories, the pipeline becomes hard to trust.

5. ASSESSMENTS

Creating and Sending an Assessment

How to Create and Send an Assessment

1 Start from Candidates or Assessments

Use **Send assessment** from a candidate record when the assessment should stay linked to that candidate.

2 Select a preset or add-on mix

Choose an active preset for speed or add individual assessment components from the library.

3 Review configuration

Confirm role/stack settings where required and check duration, weight, and required pass values.

4 Calibrate the score model

All selected components must add up to exactly 100 marks, and every selected component needs a positive contribution.

5 Choose integrity controls

Select Strict, Standard, or Relaxed depending on how controlled the candidate experience should be.

6 Generate and share access

The system generates an assessment link, Test ID, and passcode. Share those details with the candidate.

How the Assessment Builder Works

BUILDER STEPS

Builder step	What users do	What to check before moving on
Select	Choose a preset or configure individual add-ons from the library.	Make sure the correct assessment types are selected for the role and purpose.
Customize	Review selected exams and complete required config such as role or stack.	Resolve all “needs setup” items before continuing.
Calibrate	Set score contribution, pass target, and integrity mode.	Total marks must equal 100; no selected exam should be zero-weight.
Share	Copy the final access details or launch the assessment immediately.	Confirm the right candidate, link, Test ID, passcode, and expected timing.

Assessment Building Blocks

The repo shows the following built-in assessment types in the exam catalog:

CORE

CORE 2.0

PRACTICAL

GENERAL CAPABILITY

BUSINESS ANALYSIS

RCM

APPLIED LOGIC & REASONING

When to use Add-ons

The Add-on Library is the admin/configuration space for maintaining global add-on defaults and simple presets. Recruiters and reviewers usually do not need to work there daily; they use the builder output rather than editing the library itself.

6. CANDIDATE TEST EXPERIENCE

Sharing, Candidate Experience, and Integrity

How Assessment Sharing Works

What is generated

- Assessment link
- Test ID
- Passcode
- Launch/open action for immediate start

Operational defaults visible in code

- Builder-generated candidate assessments use a passcode.
- Default maximum attempts is one.
- Linked candidate assessments use the **hiring** context.
- Overall pass target defaults to 60% unless changed.

What Candidates See Before the Test

1 Assessment briefing page

The candidate sees estimated duration, exam mix, pass target, autosave status, and integrity mode.

2 Check-in page

The candidate confirms full name, email, phone (optional), and passcode when one is required.

3 Availability validation

The product shows candidate-safe messages if the link is expired, already used, or otherwise unavailable.

What Candidates See During the Test

- A timed runtime with autosave and visible progress.
- A trust banner showing the integrity preset and latest sync message.
- A navigator for jumping between questions.
- Flagging, next/back movement, and section handoff between selected exams.
- A submit review step that summarizes answered, unanswered, and flagged items before final submission.
- A recovery modal if the session loses focus or requires a full-screen return.

Integrity / Security Modes Explained in Plain Language

INTEGRITY LEVELS

Mode	What the candidate experiences	Best use case
Strict Protected Mode	Requires full-screen, blocks copy/paste and context menu, and monitors tab switches.	High-control assessments where integrity matters most.
Standard Guardrails	Monitors activity and blocks clipboard/context menu, but does not force full-screen.	Default hiring screeners where control is important but not overly rigid.
Relaxed Monitoring	Allows normal browser behavior and keeps lightweight activity monitoring only.	Low-risk or practice-style assessments.

How integrity is summarized later

Integrity review is driven by tab-hidden, copy/cut, and paste counts. In the results workspace, the risk label becomes **Clean**, **Watch**, or **Review**.

7. RESULTS

How to Review Results

Results Workspace

- Open **Results** to review submitted assessments across hiring and other contexts.
- Use search and filters for result, review state, context, integrity, role, owner, stage, and score band.
- Select up to four results for side-by-side comparison.
- Use bulk actions to update review state or linked candidate status, owner, or notes.
- Export the filtered view to CSV or JSON.

Detailed Result Review

The detailed result page combines scoring, interpretation, and candidate workflow context.

TOP STRENGTH

MAIN CONCERN

CONFIDENCE

INTEGRITY SUMMARY

Reviewers can also see category breakdowns, question/section review details, recent candidate activity, and quick actions to move the candidate forward, keep them in review, or reject them.

How to Interpret Pass / Review / Fail

Review States

- **Unreviewed:** no reviewer disposition applied yet.
- **Reviewed:** evaluated and considered complete.
- **Flagged:** requires additional attention or escalation.

Score Bands

- **High:** 75 and above
- **Mid:** 50 to 74.9
- **Low:** below 50

OUTCOME INTERPRETATION

Outcome	Plain-language meaning	Recommended HR action
Pass	The candidate met the assessment threshold and is not in the borderline band.	Move forward if role fit, resume, and interview feedback also support progression.
Review	The result is borderline or has enough integrity concern to deserve human review.	Open the detailed result, inspect weak areas and integrity notes, then decide manually.
Fail	The candidate did not meet the required threshold.	Usually reject or hold, unless a manager wants a manual exception based on broader evidence.

Important nuance

A strong raw score is not the only signal. Confidence decreases when integrity activity is high or when a result is close to the pass boundary, so reviewers should read the detailed result page before making final decisions.

8. ANALYSIS TOOLS

Filters, Comparison, Exports, and Admin Access

How to Use Filters, Comparison, and Exports

- Filter the results list first, then export. Exports follow the current view.
- Use **Review needed** as a fast saved action when triaging borderline or flagged items.
- Use compare for shortlists or calibration discussions; the UI allows up to four items at once.
- Use linked owner and stage filters when you want to isolate results tied to a specific recruiter pipeline.

How to Manage Internal Users and Roles

The **Users** page is admin-only. It combines two different administration tasks: managing internal application users and maintaining the role catalog used during candidate registration.

ROLE CATALOG ADMINISTRATION

Role catalog capability	Why it matters
Create new role	Lets HR keep hiring roles current without code changes.
Assign department	Keeps role selections cleaner and easier to scan.
Deactivate role	Retires old roles while preserving historical records.
Select core basis role	Helps align role definitions with assessment logic.

Assumption

Role names and departments are intentionally environment-specific. Use your approved HR naming standards rather than relying on example role names from test or demo data.

USER ADMINISTRATION

Task	How it works
Create internal user	Admins enter name, email, password, and role (member or admin).
Change app role	Existing database-backed users can be updated from member to admin or vice versa.
Bootstrap admin	The environment-based bootstrap admin exists outside the database-backed user list.

9. SUPPORT

Troubleshooting / FAQ

“The user cannot log in.” Confirm the email/password combination and whether the user is a database-backed user or bootstrap admin. Only admins can open the Users workspace.

“The candidate already exists.” The system blocks duplicate emails. Open the existing candidate instead of creating another record.

“My CSV import failed.” Make sure the file has a header row and includes `fullName` and `email`. Duplicate emails are skipped, not overwritten.

“The candidate says the test link is unavailable.” Common causes are expired access, a used single-attempt link, or a missing/incorrect passcode.

“The candidate cannot continue after switching tabs.” Depending on integrity mode, the runtime may require resuming focus or re-entering full-screen before continuing.

“We see a save warning during the test.” The runtime is designed to autosave regularly. Ask the candidate to keep the tab open and let the connection re-stabilize before closing the session.

“No result appears in the hiring workflow.” Confirm the assessment was linked to a candidate at send time; otherwise the result may exist as an assessment-only record.

“Why is the candidate marked Need review?” That status is used when a submitted assessment result needs human decisioning, especially around borderline or reviewed outcomes.

“Why is a role missing from registration?” It may be inactive in the role catalog. An admin can reactivate or recreate it from Users.

Best Practices

- Use one consistent owner naming format so filters and reporting stay clean.
- Complete the resume and short decision summary before escalating a candidate to a hiring manager.
- Prefer linked candidate assessments over general assessments when the result should drive a hiring workflow.
- Review integrity signals together with score, not in isolation.

- Use note types deliberately so screening, technical, and decision comments remain easy to scan.
- Deactivate old roles instead of deleting them, so historical records stay understandable.
- Export filtered result sets for meetings instead of exporting everything and sorting externally.
- Use compare view for final shortlist calibration instead of relying on memory or disconnected spreadsheets.

10. QUICK REFERENCE

Appendix: Statuses, Terms, and Tables

CANDIDATE STAGES

Stage	Meaning
New	Candidate created but not yet fully progressed.
Screening	Initial review and screener preparation stage.
Interview	Moved forward into interview workflow.
Testing	Additional testing activity is in motion.
Decision	Waiting for reviewer or hiring decision.
Offer	Offer preparation or offer-stage management.
Closed	Record closed, usually rejected or otherwise complete.

CANDIDATE INBOX / UI STATUSES

Status	Meaning
In progress	The candidate is still moving through active workflow steps.
Need review	The record needs decisioning, usually after an assessment result arrives.
Moved forward	The candidate has advanced to the next stage.
Rejected	The record is closed as unsuccessful.

ASSESSMENT STATUSES

Status	Meaning
Not sent	No assessment has been issued yet.
Sent	Assessment access has been generated and shared.
In progress	Candidate has started but not yet submitted.
Passed	Submitted and passed threshold.
Review	Submitted and needs reviewer judgment.
Failed	Submitted but did not meet threshold.

RESULT STATUSES

Status	Meaning
Pass	Candidate met the required score threshold.
Review	Borderline result or integrity-driven review needed.
Fail	Candidate scored below the required threshold.

REVIEW STATES

State	Meaning
Unreviewed	No formal reviewer action yet.
Reviewed	Outcome has been checked and processed.
Flagged	Needs extra reviewer attention or escalation.

INTEGRITY RISK LEVELS

Level	Meaning
Clean	No meaningful concern from activity counts.
Watch	Some activity was recorded and should be considered.
Review	Higher-risk integrity activity requiring closer inspection.

Common Terms Used in the App**Candidate workspace**

The People area that lists and filters candidate records.

Owner

The internal person currently responsible for the candidate or linked workflow.

Preset**Add-on**

A reusable assessment bundle made from one or more add-ons.

A configurable building block used inside the assessment builder.

Pass target

The overall weighted percentage needed to pass the assessment.

Score contribution

The mark allocation each selected exam contributes toward the total 100.

Linked workflow

A result that is attached to a tracked candidate profile, owner, and stage.

Assessment-only result

A result stored without a tracked candidate profile attached.

11. SCREENSHOT PLAN

Recommended Screenshots to Add Later

Use this checklist when you attach screenshots to a later edition of the handbook. Each image should be clear, moderately cropped, and focused on the page elements being explained.

1. Login page

What to show: email/password sign-in form and page title.

Recommended caption: "Internal users sign in here to manage candidates, assessments, results, and user access."

2. Candidates workspace

What to show: search and filters, candidate cards or rows, bulk actions, and CSV import area.

Recommended caption: "The Candidates workspace is the main hiring dashboard for intake, filtering, and actioning records."

3. Register candidate page

What to show: required fields, role picker, source choices, and owner field.

Recommended caption: "Register a candidate with the core identity, role, source, and owner details first."

4. Candidate detail page

What to show: decision panel, milestone timeline, resume section, notes section, and latest result panel.

Recommended caption: "The candidate record combines decisioning, milestones, notes, resume management, and screener status."

5. Assessment builder

What to show: step rail and the select/customize/calibrate panels, including score contribution totals.

Recommended caption: "Build a screener from presets or individual add-ons, then calibrate score contribution to 100."

6. Assessment share/access panel

What to show: generated link, Test ID, passcode, and copy/open actions.

Recommended caption: "After generation, the share panel provides the link, Test ID, and passcode to send to the candidate."

7. Candidate assessment start / check-in page

What to show: candidate full name/email/passcode fields plus the side panel with time, integrity, attempts left, and exams.

Recommended caption: "Before the assessment starts, the candidate confirms identity and sees timing, integrity, and exam details."

8. Results workspace

What to show: filters, result rows, compare action, export buttons, and bulk review controls.

Recommended caption: "The Results workspace supports review triage, comparison, exports, and linked workflow updates."

9. User access / admin page

What to show: create user form, existing users, and role catalog management entry point.

Recommended caption: "Admins use the User access area to create internal accounts and maintain role catalog options."

Suggested screenshot rule: use real production-safe or staging-safe captures with personal data removed or anonymized. Keep the same browser width across all images so the handbook looks consistent.
